Research in cognitive psychology, linguistics, and artificial intelligence – the three disciplines that have the most direct application to an understanding of the mental processes in reading – is presented in this multilevel work, originally published in 1980, that attempts to provide a systematic and scientific basis for understanding and building a comprehensive theory of reading comprehension. The major focus is on understanding the processes involved in the comprehension of written text. Underlying most of the contributions is the assumption that skilled reading comprehension requires a coordination of text with context in a way that goes far beyond simply chaining together the meanings of a string of decoded words. The topics discussed are divided into five general areas: Global Issues; Text Structure; Language, Knowledge of the World, and Inference; Effects of Prior Language Experience; and Comprehension Strategies and Facilitators, and represent a broad base of methodology and

We learn to speak and understand our native language without any great effort, for these are natural aspects of the maturation of every human being. The skills of reading and writing, by contrast, have to be learned, usually in an educational context. Now, when it comes to a foreign language, all the skills (speaking, understanding, reading and writing) have to be learned - nothing can be acquired without considerable effort. This learning process does not take place in a vacuum: it is heavily influenced by our previous experience of acquiring our native language and learning to read and write it. These facts have been taken as the background to this book. We aim this book at native speakers of Dutch who have learned to read and write their own language, and who now wish to add skill in writing English to their repertoire. Since this is our well-defined target group, we will be continually pointing to those aspects of written English which differ from comparable aspects of written Dutch, while also giving a complete guide to the writing process. There are two matters concerning the presentation of information in this book that require clarification in advance. Firstly, the book contains hundreds of numbered examples.

A practical guide to data-intensive humanities research using the Python programming language The use of quantitative methods in the humanities and related social sciences has increased considerably in recent years, allowing researchers to discover patterns in a vast range of source materials. Despite this growth, there are few resources addressed to students and scholars who wish to take advantage of these powerful tools. Humanities Data Analysis offers the first intermediate-level guide to quantitative data analysis for humanities students and scholars using the Python programming language. This practical textbook, which assumes a basic knowledge of Python, teaches readers the necessary skills for conducting humanities research in the rapidly developing digital environment. The book begins with an overview of the place of data science in the humanities, and proceeds to cover data carpentry: the essential techniques for gathering, cleaning, representing, and transforming textual and tabular data. Then, drawing from real-world, publicly available data sets that cover a variety of scholarly domains, the book delves into detailed case studies. Focusing on textual data analysis, the authors explore such diverse topics as network analysis, genre theory, onomastics, literacy, author attribution, mapping, stylometry, topic modeling, and time series analysis. Exercises and resources for further reading are provided at the end of each chapter. An ideal resource for humanities students and scholars aiming to take their Python skills to the next level, Humanities Data Analysis illustrates the benefits that quantitative methods can bring to complex research questions. Appropriate for advanced undergraduates, graduate students, and scholars with a basic knowledge of Python Applicable to many humanities disciplines, including history, literature, and sociology Offers real-world case studies using publicly available data sets Provides exercises at the end of each chapter for students to test acquired skills Emphasizes visual storytelling via data visualizations

This volume contributes to filling a gap in corpus-based research by investigating the ways in which linguistic features vary across genres/registers cross-linguistically. It brings together insightful chapters by leading scholars in the field, fruitfully exploiting genre- or register-controlled multilingual parallel and comparable corpora to: (i) problematize cross-register variation in a multilingual perspective, (ii) address methodological and theoretical issues raised by register-oriented contrastive and translation studies, (iii) investigate the cross-linguistic and cross-genre variation of specific linguistic features, such as lexical bundles, sentence-initial adverbials and tag questions, (iv) identify cross-cultural and cross-linguistic dissimilarities in expressing a functional category, viz. Appraisal, in the field of opinion mining. The book offers new cutting-edge research that should be of interest to specialists in contrastive linguistics, translation studies and cross-cultural studies. Originally published as a special issue of *Languages in Contrast* 14:1 (2014).
