"We can now precisely date a drop in temperature at the end of the last glacial period, so that the information coincides with that observed from the Greenland Ice Sheet cores," said Dr. Frederick ...

Cro-Magnons were the first fully modern Europeans--not only the creators of the stunning cave paintings at Lascaux and elsewhere, but the most adaptable and technologically inventive people that had yet lived on earth. The prolonged encounter between the Cro-Magnons and the archaic Neanderthals, between 45,000 and 30,000 years ago, was one of the defining moments of history. The Neanderthals survived for some 15,000 years in the face of the newcomers, but were finally pushed aside by the Cro-Magnons' vastly superior intellectual abilities and cutting-edge technologies. What do we know about this remarkable takeover? Who were these first modern Europeans and what were they like? How did they manage to thrive in such an extreme environment? And what legacy did they leave behind them after the cold millennia? This is the story of a little known, yet seminal, chapter of human experience.--From publisher description.

Fagan reveals human society in its infancy, facing enormous environmental challenges--including a rival species of humans, the Neanderthals.

“ The next best thing to actually seeing the prehistoric cave art of southern Franc[e] . . . A rapturous guide through five major Ice Age sites ” (Archaeology). The cave art of France ’ s Dordogne region is world-famous for the mythology and beauty of its remarkable drawings and paintings. These ancient images of lively bison, horses, and mammoths, as well as symbols of all kinds, are fascinating touchstones in the development of human culture, demonstrating how far humankind has come and reminding us of the ties that bind us across the ages. Over more than twenty-five years of teaching and research, Christine Desdemaïnes-Hugon has become an unrivaled expert in the cave art and artists of the Dordogne region. In *Stepping-Stones* she combines her expertise in both art and archaeology to convey an intimate understanding of the “ cave experience. ” Her keen insights communicate not only the incomparable artistic value of these works but also the near-spiritual impact of viewing them for oneself. Focusing on five fascinating sites, including the famed Font de Gaume and others that still remain open to the public, this book reveals striking similarities between art forms of the Paleolithic and works of modern artists and gives us a unique pathway toward understanding the culture of the Dordogne Paleolithic peoples and how it still touches our lives today. “ Her vivid descriptions help readers visualize the Cro-Magnon man or woman painting the beautiful bison, horses, mammoths, and other symbols. [A] fine reading experience. ” —Library Journal

A leading researcher on human evolution proposes a new and controversial theory of how our species came to be In this

Read Free Cro Magnon How The Ice Age Gave Birth To First Modern Humans Brian

groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own "out of Africa" theory, which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent. Stringer's new theory, based on archeological and genetic evidence, holds that distinct humans coexisted and competed across the African continent—exchanging genes, tools, and behavioral strategies. Stringer draws on analyses of old and new fossils from around the world, DNA studies of Neanderthals (using the full genome map) and other species, and recent archeological digs to unveil his new theory. He shows how the most sensational recent fossil findings fit with his model, and he questions previous concepts (including his own) of modernity and how it evolved. Lone Survivors will be the definitive account of who and what we were, and will change perceptions about our origins and about what it means to be human.

The serenity enjoyed by Tiger's family, a Homo sapien clan living among Neanderthals, is disrupted when Tiger's brother is wounded and Tiger's favorite son journeys to find a healer

Ayla, an injured and orphaned child adopted by a primitive tribe, carries within her the seed and hope of humankind in this epic of survival and destiny set at the dawn of prehistory. Reissue.

Describes the 1994 discovery made in Chauvet, France, of a cave with Stone Age rock paintings, and discusses the significance of cave art to people living in prehistoric as well as modern times.
