The Problem with Modern Diesel Engines - Still Running Strong

A basic diesel engine needs only a constant supply of clean fuel, plus air to provide oxygen for combustion. The amount of air needed is easy to under estimate – around one cubic metre per minute is required for every 10hp of engine power. Defective engine compartment ventilation, or clogged air filters, can therefore result in a loss of power.

BMW 2.0 diesel (N47/N47D20A) Ah yes, the (in)famous N47 with its well-known and documented timing chain problem. Adding insult to injury, there is also the absurd positioning of the timing chain at the back of the engine. So in order to do any repairs, the mechanic has to take it out of the car.

Seven Engines to Avoid When Buying Second-Hand Cars

One of the biggest problems with these engines is the overly complicated way that every system is set up on these trucks. The injection system is a high pressure oil controlled system that most people cannot wrap their head around. Engine oil is pressurized up to 4,000 psi to controlled injection pressure at the fuel injector nozzle.
