The Journal of Early Childhood Research is a peer-reviewed journal that provides an international forum for childhood research, bridging cross-disciplinary areas and applying theory and research within the professional community. This reflects the world-wide growth in theoretical and empirical research on learning and development in early childhood and the impact of this on provision.

Journal of Early Childhood Research: SAGE Journals
This research-paper focuses on the curriculum and practice of early childhood—a contested territory. Throughout the 20th century, discussions of early childhood have been driven by debates between those who hold that work with young children before school age should be seen as child care and those who see it as education.

Early Childhood Research Papers on the Understanding of ...

Early childhood education is formal schooling for children who are classified as early childhood. This classification usually refers to children who are between the ages of five and eight. This does not include learning that takes place within the home setting. Day cares and childcare centers do not necessarily qualify as early childhood education institutions; however, many have begun hiring certified teachers to put more emphasis on learning. This is a model introduction for a research paper.

Caribbean Childhoods: From Research to Action is an annual publication produced by the Children s Issues Coalition at the University of the West Indies, Mona. The series seeks to provide an avenue for the dissemination of research and experiences on children s health, development, behaviour and education, and to provide a forum for the discussion of these issues.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

How we raise young children is one of today’s most highly personalized and sharply politicized issues, in part because each of us can claim some level of “expertise.” The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children’s cognitive and emotional development, and more. Authoritative yet accessible, From Neurons to Neighborhoods presents the evidence about “brain wiring” and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

This annotated anthology documents historical trends and basic findings regarding music in early childhood education, development, and care. The papers in this volume discuss the main research trends of musical engagement with early children, such as music in the family, employing music in child care, and musical skill and development. This collection hopes to stimulate further reflections on the implementation of music in daily practice. The volume represents many facets of research from different cultural contexts and reflects trends and projects of music in early childhood. The findings incorporate a historical perspective with regards to different topics and approaches. The book provides practitioners and researchers of music education, music development, and music psychology, an opportunity to read a selection of articles that were previously published in the journal Early Child Development and Care. Each paper concludes with an annotation note supplied by the principle author addressing how they see their article from the perspective of today.

The first years of life lay the foundations for a child’s future development and learning. Reflecting on the important role of early childhood education and care (ECEC) services in providing all children with the skills they need to be successful in school, many countries have increased their ...

“Christakis . . . expertly weaves academic research, personal experience and anecdotal evidence into her book . . . a bracing and convincing case that early education has reached a point of crisis . . . her book is a rare thing: a serious work of research that also happens to be well-written and personal . . . engaging and important.” --Washington Post “What kids need from grown-ups (but aren’t getting) ...an impassioned plea for educators and parents to put down the worksheets and flash cards, ditch the tired craft projects (yes, you, Thanksgiving Handprint Turkey) and exotic vocabulary lessons, and double-down on one, simple word: play.” --NPR The New York Times bestseller that provides a bold challenge to the conventional wisdom about early childhood, with a pragmatic program to encourage parents and teachers to rethink how and where young children learn best by taking the child’s eye view of the learning environment To a four-year-old watching bulldozers at a construction site or chasing butterflies in flight, the world is awash with promise. Little children come into the world hardwired to learn in virtually any setting and about any matter. Yet in today’s preschool and kindergarten classrooms, learning has been reduced to scripted lessons and suspect metrics that too often undervalue a child’s intelligence while overtaxing the child’s growing brain. These mismatched expectations wreak havoc on the family: parents fear that if they choose the “wrong” program, their child won’t get into the “right” college. But Yale early childhood expert Erika Christakis says our fears are wildly misplaced. Our anxiety about preparing and safeguarding our children’s future seems to have reached a fever pitch at a time when, ironically, science gives us more certainty than ever before that young children are exceptionally strong thinkers.

In her pathbreaking book, Christakis explains what it’s like to be a young child in America today, in a world designed by and for adults, where we have confused schooling with learning. She offers real-life solutions to real-life issues, with nuance and direction that takes us far beyond the usual prescriptions for fewer tests, more play. She looks at children’s use of language, their artistic expressions, the way their imaginations grow, and how they build deep emotional bonds to stretch the boundaries of their small worlds. Rather than clutter their worlds with more and more stuff, sometimes the wisest course for us is to learn how to get out of their way. Christakis’s message is energizing and reassuring: young children are inherently powerful, and they (and their parents) will flourish when we learn new ways of restoring the vital early learning environment to one that is best suited to the littlest learners. This bold and pragmatic challenge to the conventional wisdom peels back the mystery of childhood, revealing a place that’s rich with possibility.

‘Andrea Nolan and her colleagues have written a uniquely wise and reader-friendly account of all aspects of researching early childhood’ - Liz Brooker, Reader in Early Childhood, University of London Institute of Education In this innovative guide to research in early childhood, the research process is presented as a journey and this book is your roadmap. The authors take you step-by-step through the practical considerations and complexities of undertaking research with young children featuring the real-world research journeys of two student researchers. Their authentic stories describe the emotions, challenges and moments of exhilaration involved in completing a research project. The book gives guidance on all aspects of the research process, including: - selecting a topic - ethical considerations - collecting your data - analysing your data - disseminating your findings. This book will be an invaluable guide to students of Early Childhood completing a research project or writing a thesis or dissertation.
