A review of the existing literature on the China-India comparative theme conveys the distinct impression that the literature largely projects China and India as intrinsically competitive entities. While much has been written on where and why China and India are contesting, particularly from a political sense, very little attention has been devoted to mutual collaboration, whether existing or potential. Such possibilities are at their greatest in economics, which will dominate the future China-India relationship. This book explores Sino-Indian ties from a comparative economic perspective and argues that it is erroneous to visualise the ties either from exclusively competitive or collaborative perspectives. The future relationship between the two countries will be characterised simultaneously by two 'C's': competition and collaboration, which are both linked to common challenges facing them. Arguing that while competition in the economic sphere is inevitable, given their size and aspirations, the book contends that negative externalities from competition will encourage both countries to collaborate and expand the scope of such collaboration. The book's refreshing angle makes it a must-read for those interested in Sino-Indian relationship.

This important book is an authoritative work of reference on the G20, G8 and G20 reform, and relevant information sources. Peter Hajnal thoroughly traces the origins of the G20, surveys the G20 finance ministers' meetings since 1999 and the series of G20 summits since 2008. He examines agenda-setting and agenda evolution, discusses the question of G20 membership and surveys the components of the G20 system. He goes on to analyze the relationship of the G20 with international governmental organizations, the business sector, and civil society and looks at the current relationship between the G8 and the G20. He also discusses how G20 performance can be monitored and evaluated. The book includes an extensive bibliography on the G20, G8/G20 reform, and issues of concern to the G20. The book is a companion volume to *The G8 System and the G20: Evolution, Role and Documentation* (Hajnal, 2007) and is an essential source for all scholars and students of the G20.

Energy has become a central concern of many strands of geographical inquiry, from global climate change to the effects of energy decisions on our lives. However, many aspects of the 'black box' of relationships at the energy-society interface remain unopened, especially in terms of the spatial underpinnings of energy production and consumption within nations, cities and regions. Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world. Providing an integrated perspective on the complex interdependencies between energy and geography, *The Routledge Research Companion to Energy Geographies* offers a timely conceptual framework to study the multiple facets of energy geography, including security, space and place, planning, environmental science, economics and political science. Illustrating how a geographic approach towards energy can aid decision-making pathways in the domains of social justice and environment, this book provides insights that will help move the international community toward greater cooperation, stability, and sustainability.
