Shape interrogation is the process of extraction of information from a geometric model. It is a fundamental component of Computer Aided Design and Manufacturing (CAD/CAM) systems.

This book provides a bridge between the areas geometric modeling and solid modeling. Apart from the differential geometry topics covered, the entire book is based on the unifying concept of recasting all shape interrogation problems to the solution of a nonlinear system. It provides the

The book consists of 16 chapters which are divided into two parts.

The first part contains nine chapters which describe tension

compression, hardness,
bending, torsion – pure
shear, impact loading,
creep and stress rupture,

New materials enable advances in engineering design. This book

describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available.

A novel approach is
