~~GERD is caused by frequent acid reflux. When you swallow, a circular band of muscle around the bottom of your esophagus (lower esophageal sphincter) relaxes to allow food and liquid to flow into your stomach. Then the sphincter closes again. If the sphincter relaxes abnormally or weakens, stomach acid can flow back up into your esophagus.~~

~~Management of Gastroesophageal Reflux Disease American ...~~

~~Getting a case of acid reflux (heartburn) once in a while isn't unusual, but some people suffer from burning discomfort, bloating and belching almost every time they eat. About 20% of the population has gastroesophageal reflux disease (GERD), a chronic acid reflux condition that's diagnosed by a doctor. Normally, the esophageal sphincter (a muscular tube that lets food pass into the stomach and then cinches shut to block it from coming back up) protects the esophagus from stomach acid.~~
