Whether out for an afternoon's sail or embarking on a long offshore passage, there is always an element of chance and uncertainty about being at sea. The ideal on-board guide to fixing and maintaining your outboard engine.

In January 2014 the 38ft sailboat "Black Cat" set out to race across the South Atlantic Ocean in the Cape to Rio Race. On the second day of the race they broke their rudder while surfing at 22 knots and were subsequently capsized by a massive wave in a big storm. This book tells the story of the race, the boat, the crew and what happened on that day, how crew, food and equipment were thrown around the interior, what happened to the crewman who was in the cockpit at the time, what damage was done to the boat and what the crew did to cope with and recover from the situation in which they found themselves.

The Skipper's Mast and Rigging Guide is a new title in our popular series of cockpit guides that are designed for easy reference on board in all weather conditions. Of all the elements that are hard to set up on a sailboat, gauging how mast, running rigging and standing rigging should work in combination with each other is perhaps the trickiest of arts - some might call it a black art. And of course it is essential to get it right in order to stabilise the mast, reduce undue stress and consequently ensure the safety of everyone on board. This handy cockpit guide will simplify and explain to the reader exactly how to set up their mast, rigging and running rigging for whatever size of yacht and with whatever rig combination. It will take the reader through the basics of setting up and adjusting their rig step by step with helpful diagrams and detailed colour photographs throughout. With this book in one hand and a spanner in the other, skippers will be able to make their own adjustments without having to call in expensive riggers.

There's advice and tips from highly respected boatyard owners, specialists and surveyors, as well as

The Sea Survival Manual is the definitive book on the subject for anyone aboard a yacht of any size. It is aimed at the yachtsman or seafarer who is likely to proceed to sea out of the sight of land, whether for pleasure or professional reasons. Fully compliant with the IMO (International Maritime Organisation) resolutions and MCA (Maritime Coastguard Agency) regulations it embodies Sea Safety checks issued by the MCA and RNLI and is completely international in its appeal. Includes chapters on safety and survival equipment, Global Maritime Distress and Safety Systems (GMDSS), liferafts, grab bags, medical equipment and advice, first aid and emergency treatment, abandoning ship, survival in a liferaft and rescues at sea. This is the first modern book to tackle the subject from the small craft point of view.

A riveting account of a modern fighter squadron at war and the exploits, triumphs, and traumas of its pilots. The Black Aces. Their courage, ferocity, and instincts made them

legendary in military aviation. Flying F-14 Tomcats, they played as much a part in recent US operations in Kosovo as did any air squadron in the theater, air force or navy, and probably more. Because of its superior performance, sophisticated equipment and the two-man crews who took it upon themselves to do something extra, the Tomcat and its aviators distinguished themselves over and over. Forced to locate Serb fighters operating covertly in a mountainous land much like Afghanistan, with almost no help from ground spotters, VF-14 pilots and backseaters spearheaded new methods for the navy to pinpoint, identify, and destroy enemy troops and weapons. These were tasks that fighter crews had seldom had to do before. The Aces had to break rules and frequently go in harms way in order to be successful. And they performed so well that for the first time in aviation history, a fighter squadron - theirs - was awarded The Wade McClusky Trophy, the navy's premier bombing honor. The award, named for a World War II dive bomber pilot and post-WorldWar II admiral, had been won previously only by bombing squadrons. Robert Wilcox spent two weeks with The Black Aces aboard the aircraft carrier USS Roosevelt and here provides a long-awaited, never-before-seen glimpse into the world of a modern navy fighter squadron. Wilcox takes readers into the cockpits as the pilots go out and attack targets while avoiding anti-aircraft weaponry. He takes us into the war room as they plan their strikes and into their cabins as they contemplate the danger they are facing. And the reader can't help but worry for these men as they head off into battle, can't help sitting on the edge of the seat as they try to land at night, in a rainstorm, with waves crashing against the ship, and can't help ducking with them as they dodge missile attacks. And in the end, it is impossible not to feel for these aviators as they question their own courage, or to cheer for them when they finally return

safely. Black Aces High is a story of fear and courage, mishap and success, fighting spirit and military innovation. It's a human story that goes behind the smiling, sunglass-wearing facade of aviators flashing a "V", the sterile, slow motion target video that has become a staple of Pentagon briefings, and the rock 'n' roll cowboy image of fighter crews seen in the movies. Instead, it is a story that shows who these aviators really are and what they do beyond what we know, a story which probably will be repeated again and again as our carriers continue to be deployed in the new, 21 century war our nation is fighting.
