The Rise of European Security Cooperation by Seth G. Jones

One of the most striking developments in recent international politics has been the significant increase in security cooperation among European Union states. Seth Jones argues that this increase in cooperation, in areas such as economic sanctions, weapons production and collaboration among military forces, has occurred because of the changing structure of the international and regional systems.

The Rise of European Security Cooperation

This is an extraordinarily well-researched and neatly presented book, which convincingly illustrates the rise of European defense capabilities in the last two decades. The explanatory thesis, however, is just classic neo-realism: change in the international system has caused Europe to seek defense autonomy in order to compete with the United States.

When we think of Europe during the High Middle Ages, we see buoyant optimism everywhere. Europe was striking out against its neighbors in the movements of the Crusades, there was an unprecedented period of economic growth, and the age saw the soaring of great architecture—first Romanesque and then Gothic—cathedrals and churches all over Europe.

After a rude awakening to growing security issues, from the war in Ukraine to terrorist attacks and unsecured borders at the onset of the refugee crisis, European states have also begun increasing their defense investments, putting an end to the continuous decrease that had taken place since the 1990s. Although some countries, most notably Germany, still lag behind, recent trends point in the right direction.

Following a series of attacks since 2015, the European Union has adopted various measures to combat terrorism. While the primary responsibility for combating crime and ensuring security lies with member states, recent years' terrorist attacks have shown that security is also a common responsibility.

A systematic and comprehensive analysis of the significant increase in security cooperation among European states.

This book explores European security and defense R&D policy, unveiling the strategic, industrial, institutional and ideational sources of the European Commission's military research initiative. Starting from a well-defined empirical epicentre—the rise of non-civilian R&D priorities in the European Union—this book covers interrelated themes and topics such as approaches to arms production and R&D collaboration relationships between European R&D-related institutions technology and research foundations of European security policy past and present European armament collaborations transatlantic R&D collaboration the militarization of border security. Divided into 5 sections, the enclosed chapters explore the EU technology and innovation policy in regards to security, industrial competitiveness and military capabilities. The terrorist attacks in the US on September 11, 2001 provided a window of opportunity for the introduction of security as a distinct European R&D priority. In fact, since 2002, the Preparatory Action for Security Research (PASR) has funded 45 million euros to 39 research consortia to conduct security R&D. While the idea of pooling defense research efforts and programmes in Europe is not new, the establishment of institutions like the European Defense Agency (EDA) are a major step into institutionalizing European agencies involvement in supporting defense technology research. It is against this backdrop of policy developments that this book is positioned, in addition to addressing some of the political, economic, industrial and philosophical questions that arise. Featuring contributions from a variety of academic fields and industries, this book will be of interest to scholars, researchers, students and policy makers in the fields of security policy, international relations, innovation, European studies and military studies.

Since the end of the Cold War, international institutions have had to rise to challenges of instability and insecurity in Europe. Fergus Carr and Theresa Callan examine the changing nature of European security, cooperation and conflict. A key theme is the development of the new European security architecture and the roles of NATO, the Organization for Security and Cooperation in Europe, the European Union and the United Nations as security providers in contemporary Europe.

Focuses on the inner workings of NATO during the period 1996-97. After a summary of theoretical reflections on military alliances, chapters describe four paths to compromise (US, British, French, and German) without which the goals and complex formulae devised in 1996 and 1997 could not have been agreed upon, and analyze the international adaptation of NATO and its strength of consensus on both sides of the Atlantic. Fully revised and updated, the second edition of this leading textbook provides a systematic assessment of security in contemporary Europe. The book examines the changing character of security and assesses the extent of the threats posed by different challenges, as well as the policy dilemmas involved in responding to these concerns. The nature of security in Europe has been transformed in recent years. Andrew Cottee argues that this is a result of two key developments: the emergence of a security community - a zone of peace where war is inconceivable across much of Europe - and the presence of new security threats such as terrorism and energy dependence. Set in the context of the rising power of non-Western states and the continuing fall-out from the global economic crisis, this text provides a comprehensive analysis of Europe's new security challenges. Europe's traditional problem of war between states is being displaced by a new and equally daunting set of security challenges. While major war within Europe remains unlikely, the 2008 Georgia war and the 2011 Libya war were reminders that violent conflicts are still prevalent on Europe's periphery and can pose major challenges for European governments, NATO and the EU. At the same time, terrorism, nuclear proliferation as well as non-military problems like mass migration and climate change threaten Europe's security. This text is the perfect companion for advanced undergraduate and Master's level courses on European security, whether within courses in Security studies, European studies or International Relations. New to this Edition: - New framework for analysing European security - Highly topical issues covered, including Arab Spring, rise of BRIC countries, terrorism and European energy dependence

This volume serves as a prism through which the European Union's external relations and security can be assessed. Experts tackle strategic issues such as Russia's relationship with the West, the rise of China (with special reference to arms supplies), Iran's nuclear program, and European homeland security against the background of global terrorism. On these issues and others, transatlantic relations continue to be more relevant than ever, with the United States and the EU intertwined in the world's tightest network of economic and societal relations. As the enlarging EU stretches to cover an expanding area of competence, its responses to these challenges affect not only its internal security but increasingly that of its neighbors and other powerful actors on the world stage.

During the Cold War, the two global superpowers were able to come together to resolve many issues of transparency and common challenges, leading to a change in European and global security. The OSCE covered the area formerly occupied by NATO and the Warsaw Pact, championing the Helsinki Final Act, which became a key international instrument to encourage peace and security. Following the end of the Cold War, the OSCE became a key institution positioned between the European Union and NATO, focusing on furthering democracy, protecting human and minority rights, and encouraging military reform in a drastically dynamic region. David J. Galbreath sheds light on an institution that changed the face of global security during the Cold War and championed the rise of democratization in Central and Eastern Europe as well as the former Soviet republics following the collapse of the Soviet Union.

This volume provides the first geographically and thematically comprehensive study of the evolution and current state of the national security and defence policies, strategies, doctrines, capabilities, and military operations, as well as the alliances and security partnerships, of European armed forces.
